

## *Strategic Planning & Management Consulting Capability*

### **Program Portfolio Management and Support**

#### *Employing proven project management practices*

With the growing demand for citizen self-service and support, Information Technology (IT) expenditures in the federal government continue to increase.

As a result, the scope and complexity of government projects has increased. Employing proven project management practices ensures that a project's scope; resource management, and costs are properly controlled.

Catapult Technology's Program Portfolio Management and Support services provide project management to the federal government in the areas of planning, oversight, and cost control.

#### **How It Works:**

You require successful project management. Catapult's program management experts have a proven track record in managing projects of a wide range of scope and complexity, and not limited to only IT projects.

We also have significant project management experience in the areas of human resource development, security planning, and program analysis.

Additionally, Catapult provides Project Management Office (PMO) support to ensure that you have proper control and governance structures in place.

Our services are grounded in best practices established by the Project Management Institute (PMI). In fact, Catapult requires that all of our project managers are certified by PMI as Project Management Professionals (PMPs).

Catapult's success in project management has allowed us to extend our range of services in the federal marketplace to include quality management, communications, and change control.
